Padding a Ski Tip!

Using a length of split foam pipe insulation, carve out a semi circle in the centre.

Making sure to leave the material on one side.

Wrap the foam over each edge and around the ski tip. Use tape to hold it in place.

Repeat the process to cover the handle as well. Use Duct Tape to hold it all onto the ski and smooth it out.

Note: Each style of ski will vary. Adjust the sizes to suit your skis.
